Simphiwe's Flowerpot

Small Business Proposal.

Founded in 2026, Simphiwe's flowerpot is a boutique floral design studio which is dedicated to crafting high end floral arrangements that capture life's most pivotal moments. This business was established to provide customers with professionally designed flowers for important personal, cultural, and corporate occasions. Its services are intended to cover both celebratory and emotional milestones, including weddings, funeral, birthdays, and anniversaries. The business aims to distinguish itself through personalized arrangements that consider the customers preferences, occasions, and colour choices. As a newly established organization, Simphiwe's flowerpot will use its website as an important tool for introducing the brand to new customers and providing products to customers.

Mission Statement

The mission of Simphiwe's Flowerpot is to speak the unspoken language of emotion through floral artistry. As the business aims to transform important moments into meaningful visual experiences through carefully selected flowers and professionally designed arrangements. Quality, creativity, professionalism, and customer satisfaction form the foundation of the organisation's service delivery.

Target Audience

- Individuals who are looking for flowers for birthdays, anniversaries, Valentine's Day, Mother's Day, graduations, and other seasonal occasions will also be targeted.
- Organisations who require flowers for weddings, corporate events, conferences, and other functions.

Website Goals and objectives

The primary goal of the website is to establish a professional online presence for the Simphiwe's Flowerpot which will make the services accessible to the customers. Another important objective is to provide customers with an accessible platform for requesting consultation appointments for weddings, funerals, corporate functions, and other, which makes it easy for client to order

Current website analysis

Since the business is still new, 2026, it does not have an existing website. We are going to create an opportunity that develops the business online presence from the beginning without needing to redesign or replace an outdated website. Customers may also have to rely on social-media platforms or direct communication to view floral arrangements and request services. The website can also reduce the amount of repetitive information that staff need to provide through telephone calls or social media. The website will therefore serve as a foundation for future digital marketing, customer communication, and business expansion.

Proposed Website Features and Functionality

The proposed website will contain a minimum of five core pages that provide visitors with information about the organisation and its services.

- The **index.html** page will serve as the homepage and will contain a hero banner showcasing seasonal floral arrangements, introductory content, navigation links, and clear call-to-action buttons.
- The **about.html** page will provide the company's background, mission, values, and information about the lead floral designer.
- The **services.html** page will organise the available floral services into categories such as funerals, weddings, corporate events, birthdays, and seasonal occasions. The **enquiry.html** page will contain a detailed form through which customers can provide information about their preferred service, event date, arrangement requirements, budget, and contact information.
- The **contact.html** page will provide practical information that customers need when communicating with or visiting the business. It will also include the physical shop address, telephone contact details, email address, operating hours, and an interactive location map where appropriate.

Design and User Experience (UX)

The visual design of Simphiwe's Flowerpot will be based on a natural, elegant, and professional aesthetic that reflects the organisation's floral identity.

The primary colour palette will be;

Deep Botanical Green

Soft Cream

Soft Rose Blush

Layout Approach: The website will use a card-based gallery layout to display floral services and arrangements. Each service card will contain an image, service name, short description, and a button directing users to additional information or the enquiry form.

Technical Requirements

The website will be developed using standard web technologies consisting of semantic

- HTML5
- CSS
- JavaScript.

HTML5 will be responsible for creating the structure and content of each webpage using appropriate semantic elements such as headers, navigation sections, main content areas, forms, and footers.

CSS3 will be used to control the visual appearance of the website, including colours, typography, spacing, layouts, animations, and responsive behaviour.

JavaScript will be used to provide client-side interactivity and functionality without depending on external JavaScript frameworks.

Timeline and Budget

The proposed development timeline will consist of three main phases covering approximately five weeks.

Phase 1, during Weeks 1–2, will focus on gathering requirements, defining the website's objectives, developing the sitemap, and creating the initial HTML structure.

Phase 2, during Weeks 3–4, will focus on implementing the CSS design, developing responsive layouts, adding images and content, and conducting initial user-interface testing.

Phase 3, during Week 5, will focus on JavaScript functionality, form validation, final testing, fixing identified issues, and preparing the website for deployment. This phased approach will make it easier to monitor progress and ensure that the main components of the website are completed before the final deployment stage.
